

Infor EAM Business Edition

➔ Use Infor's pre-configured enterprise asset management solution to achieve a faster return on assets.

Be enterprising.

Underperforming capital assets can leave tremendous profit potential on the table. Insufficient attention to the optimization of assets can lead to operating surprises that are even more punishing. Enterprising organizations recognize effective enterprise asset management (EAM) as an opportunity to reduce risk and enhance profitability.

The challenge, however, is two-fold. First, organizations must find a time-tested solution that will enable the company to increase the life and value of assets, optimize asset utilization, decrease cost of operation, and improve decision-making. Second, they also must find a solution that can be implemented quickly and will be easy to use and maintain. That's why successful companies choose technology from Infor™, one of today's largest business software providers.

Leverage experience.

Infor EAM Business Edition is a powerful enterprise asset management solution that enables small and mid-size organizations to control critical functions such as work orders, purchasing, inventory, and preventative maintenance, without the investment and extended implementation time required for a larger-scale installation. Designed for companies with single or multiple sites, this solution increases productivity while reducing downtime by enabling organizations to manage several essential business functions from within a single web-based solution.

INFOR[™]
be enterprising

Infor EAM Business Edition provides companies that have small or no IT departments with a full-featured solution that delivers unparalleled insight into operations and can fully integrate with additional enterprise applications, advantages typically reserved for applications designed for large, multinational corporations. The security model is also uncomplicated, reducing installation time even further. System users access the features and functionality of web-architected Infor EAM software through a browser, working with an easy-to-use graphical user interface.

Get business specific.

Infor EAM Business Edition offers the features and modules you need to quickly achieve a return on your assets.

Features

- *Graphical user interface*—access the application through a standard web browser, a familiar tool that fosters user-acceptance and reduces training. This application also features a built-in, drag-and-drop screen designer that allows you to custom design screens without any prior programming knowledge.
- *Predefined reports*—select from a variety of predefined reports including assets, materials, purchasing, scheduling, and work.

- *Key performance indicators (KPIs)*—leverage the software's pre-configured KPIs, which are based on industry best practices. Monitor critical asset performance indicators, such as proactive versus reactive work orders, without having to configure software or run reports. Using dashboard-like gauges, KPIs provide a snapshot of how assets are performing in an easy-to-read format, right from the product home page.
- *Web architecture*—access information stored in your application over any Internet or intranet connection. With Infor EAM, everyone from the CEO to the plant manager has a way to stay connected to every facet of operations.
- *Minimal hardware*—eliminate the need for separate hardware for the application, database, and reports. This application can run on a single server.

Modules

- *Assets*—identify, track, locate, and analyze your physical assets. By compiling asset data—such as location, cost history, warranties, claims, meters, and documents—with this Infor EAM application, you can maximize productivity and extend asset life.
- *Work management*—track all aspects related to work performed on assets, from installing new equipment to issuing corrective or preventive maintenance work orders. The ability to track and manage work requests, labor, planning, and scheduling enables you to make the most of your resources while improving productivity. For example, you can use Infor EAM Business Edition to approve requisitions for plant maintenance. You can easily view these work requisitions to see specific information, such as parts, service time, and personnel needed to fill the request. After reviewing all the details, you can approve the requisition online.
- *Preventive maintenance*—create preventive maintenance tasks based on a fixed date, flexible time period, or metered usage. You also can incorporate routes with a task under a single work order to service multiple assets that share similar requirements. Infor EAM can automatically adjust maintenance schedules to compensate for early or late preventive maintenance work accomplishment.

- *Materials management*—monitor and control the inventories of storerooms to minimize inventory holdings while fully supporting part and supply demands. Tools including class calculations and assignments support parts receipts, issues, returns, and cycle counts. This module offers a choice of automatic storeroom replenishment methods: Min-Max or Reorder Point-Order Quantity.
- *Purchasing*—ensure that the right parts are ordered, and track delivery times and goods receipts. This module addresses blanket purchase orders and quotation processing.

While many add-ons are available, the following represent the solution add-ons that are most requested and that provide especially great value to our client base:

- *Mobile*—makes it possible to download work assignments from the Infor EAM database, using docking cradles or dial-up and wireless connections. This automates virtually every aspect of maintenance and data collection, and allows users to create field-based work orders, use drill-down menus to retrieve detailed information about a piece of equipment, and capture actual “wrench time” as work occurs.
- *Hosting*—simplifies the maintenance of systems and software. Infor can host facilities’ asset performance management software and databases on their servers, freeing up your IT department and other resources. Application users access the Infor EAM solution through a secure Internet connection. Since the software is housed by Infor, application updates and patches are included. Hosted solutions eliminate costs associated with hiring additional IT staff, purchasing hardware, and backing up data. The solution is extremely secure, efficient, and cost-effective.

 More than 60 percent of the Fortune 500 use Infor software to achieve effective enterprise asset management.

See results now.

Designed to get you up and running quickly, this pre-configured solution also is designed to get you up and running effectively and profitably. Customers using Infor EAM software have reported results such as:

- 20% improvement in labor productivity
- 20% reduced inventory carrying costs
- 10% increase in fleet availability
- 50% increase in warranty cost recovery
- 50% reduction in purchasing process costs

Unlike client-server software, which requires the installation of software for each client computer and offers limited operating interactions, this web-architected solution offers significant benefits including reduced IT expenditures, reduced maintenance time and effort, and a foundation for continuous, consolidated technology.

Infor EAM Business Edition is highly scalable and can grow with your business. It is fully upgradeable from release to release to further protect your investment, and you can easily upgrade to other products in the Infor EAM suite to realize even more benefits.

About Infor.

Infor delivers business-specific software to enterprising organizations.
